

People in prison are deprived of their freedom - they should not be deprived of their health.

Out of 39 countries in the
WHO European Region
only

2% have data on

Overweight

9% have data on

Tobacco smoking
Injection drug use

15% have data on

High blood pressure
Hepatitis B

19% have data on

Tuberculosis

21% have data on

HIV
Hepatitis C

**More and better data is
needed to improve health in
prisons and ensure a better
transition **back into society****

Improving prison health
supports human rights and
reduces inequities
